-!- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS
-!- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS
THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC
MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING OF HETEROGENEOUS CELL TYPES. THIS CADHERIN MAY PLAY A
IMPORTANT ROLE IN ENDOTHELIAL CELL BIOLOGY THROUGH CONTROL OF THE
COHESION AND ORGANIZATION OF THE INTERCELLULAR JUNCTIONS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11
                                                                                                                                                                                                                                                                                                                                                                                                                                             SÜBUNIT: PHYCOBILISOMES OF THIS ORGANISM ARE COMPOSED OF A TWO CYLINDER CORE, FROM WHICH SIX RODS RADIACE. THE CORE IS MAINLY COMPOSED OF ALLOPHYCOCYANIN ALPHA AND BETA CHAINS, AND OF THREE MINOR COMPONENTS: THE ALLOPHYCOCYANIN ALPHA-B CHAIN, A 18.3 kDaPOLYPEPTIDE, AND THE ANCHOR POLYPEPTIDE LCM. SUBCELLULAR LOCATION: ANCHORS THE PHYCOBILISOME PERPENDICULARLY TO THE STROMAL SURFACE OF THE THYLAKOID MEMBRANE.
                                                                                                                                                                                                                                                                                                                                                                SIMILARITY: THE REPEATED DOMAINS ARE SIMILAR TO THE N-TERMINAL REGIONS OF PHYCOCYANIN ROD LINKER POLYPEPTIDES.
SIMILARITY: THE PHYCOBILIN-LIKE DOMAINS ARE SIMILAR TO PHYCOBI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C. Natl. Acad. Sci. U.S.A. 87:2152-2156(1990).
FUNCTION: THIS PROTEIN IS POSTULATED TO ACT BOTH AS TERMINAL ENERGY ACCEPTOR (BY ITS PHYCOBILIN-LIKE DOMAINS) AND AS A LIP POLYPEPTIDE (BY ITS REPEATS AND ARMS) THAT STABILIZES THE PHYCOBILISOME CORE ARCHITECTURE.
                                                                                                                                                                                                                                                                                                                                             FROM VARIOUS SPECIES.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SUBCELLULAR LOCATION: Chloroplast (By similarity).

TISSUE SPECIFICITY: LEAVES AND SEEDS.

DEVELOPMENTAL STAGE: IT IS PRESENT IN YOUNG COTYLEDONS AT 14 DAYS AFFER FERTILIZATION (DAF) WHEN CELLS ARE STILL RAPIDLY DIVIDING.

AFFER FERTILIZATION (DAF) WHEN CELLS ARE STILL RAPIDLY DIVIDING.

LEVELS STEADILY ACCUMULATE UNTIL THE END OF THE CELL EXPANSION PHASE (35-40 DAF) AND WITH THE BECINNING OF THE SEEDS DESICCATION PHASE (35-40 DAF) AND WITH THE BECINNING OF THE SEEDS DESICCATION PHASE AT 50 DAF, THE LEVELS DECREASE TO VERY LOW LEVELS.

SIMILARITY: BELONGS TO THE BACTERIAL AND PLANTS GLUCOSE-1-
PHOSPHATE ADENYLYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diphosphate + ADP-glucose.
ENZYME REGULATION: ACTIVATED BY 3'PHOSPHOGLYCERATE,
BY ORTHOPHOSPHATE. ALLOSTERIC REGULATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: THIS PROTEIN PLAYS A ROLE IN SYNTHESIS OF SI
IT CATALYSES THE SYNTHESIS OF THE ACTIVATED GLYCOSYL I
ADP-GLUCOSE FROM GLC-1-P AND ATP.
CATALYTIC ACTIVITY: ATP + alpha-b-glucose 1-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PATHWAY: STARCH BIOSYNTH SUBUNIT: HETEROTETRAMER.

"Isolation, characterization, molecular gene cloning, and sequencing
of a novel phytase from Bacillus subtilis.";

Appl. Environ. Microbiol. 64:2079-2085(1998).

-i- FUNCTION: CATALYZES THE HYDROLYZIS OF INORGANIC ORTHOPHOSPHATE
FROM PHYTATE. ONLY PHYTATE. ADP, AND ATP WERE HYDROLYZED (100, 75,
AND 50% OF THE RELATIVE ACTIVITY, RESPECTIVELY). HAS MAXIMAL
ACTIVITY AT PH 7 AND 55 DEGREES CELSIUS.

-i- CATALYTIC ACTIVITY: Myo-inositol hexakisphosphate + H(2)0 = D-myo-
inositol 1,2,4,5,6-pentakisphosphate + phosphate.

-i- COTACTOR: ISOLATED ENZYME REQUIRED CALCIUM FOR ITS ACTIVITY AND/OR

2:
        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB DB
